

CLIENT PROFILE

The client's job is **pirate**. He always gets on a ship. He is **short** and he has **only one eye and one hand**. Another his hand is made from metal. So he can't put on clothes well. His **hobby is to take care of animals**. A bird always rides on him. In his room, there are a lot of fishes and birds. He likes animals very much. But **his ship sometimes swings** because the weather above the sea can change easily. So, they are a little tired. There are not only animals and the client on his ship. Other people who cook meals and move the ship are also there. But they don't have any animals. So, I think they don't like animals very much. They and animals are important for the client.

His ship isn't so strong and heavy. It swings in a storm very heavy. So there aren't any things on the ship and they are in some rooms. Though the client has some wounds, he can go upstairs to use rope and work on the ship as a member in a storm. And then, always the bird on him. I think they are very strong and tough.

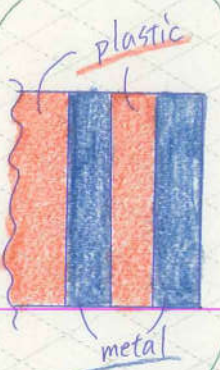

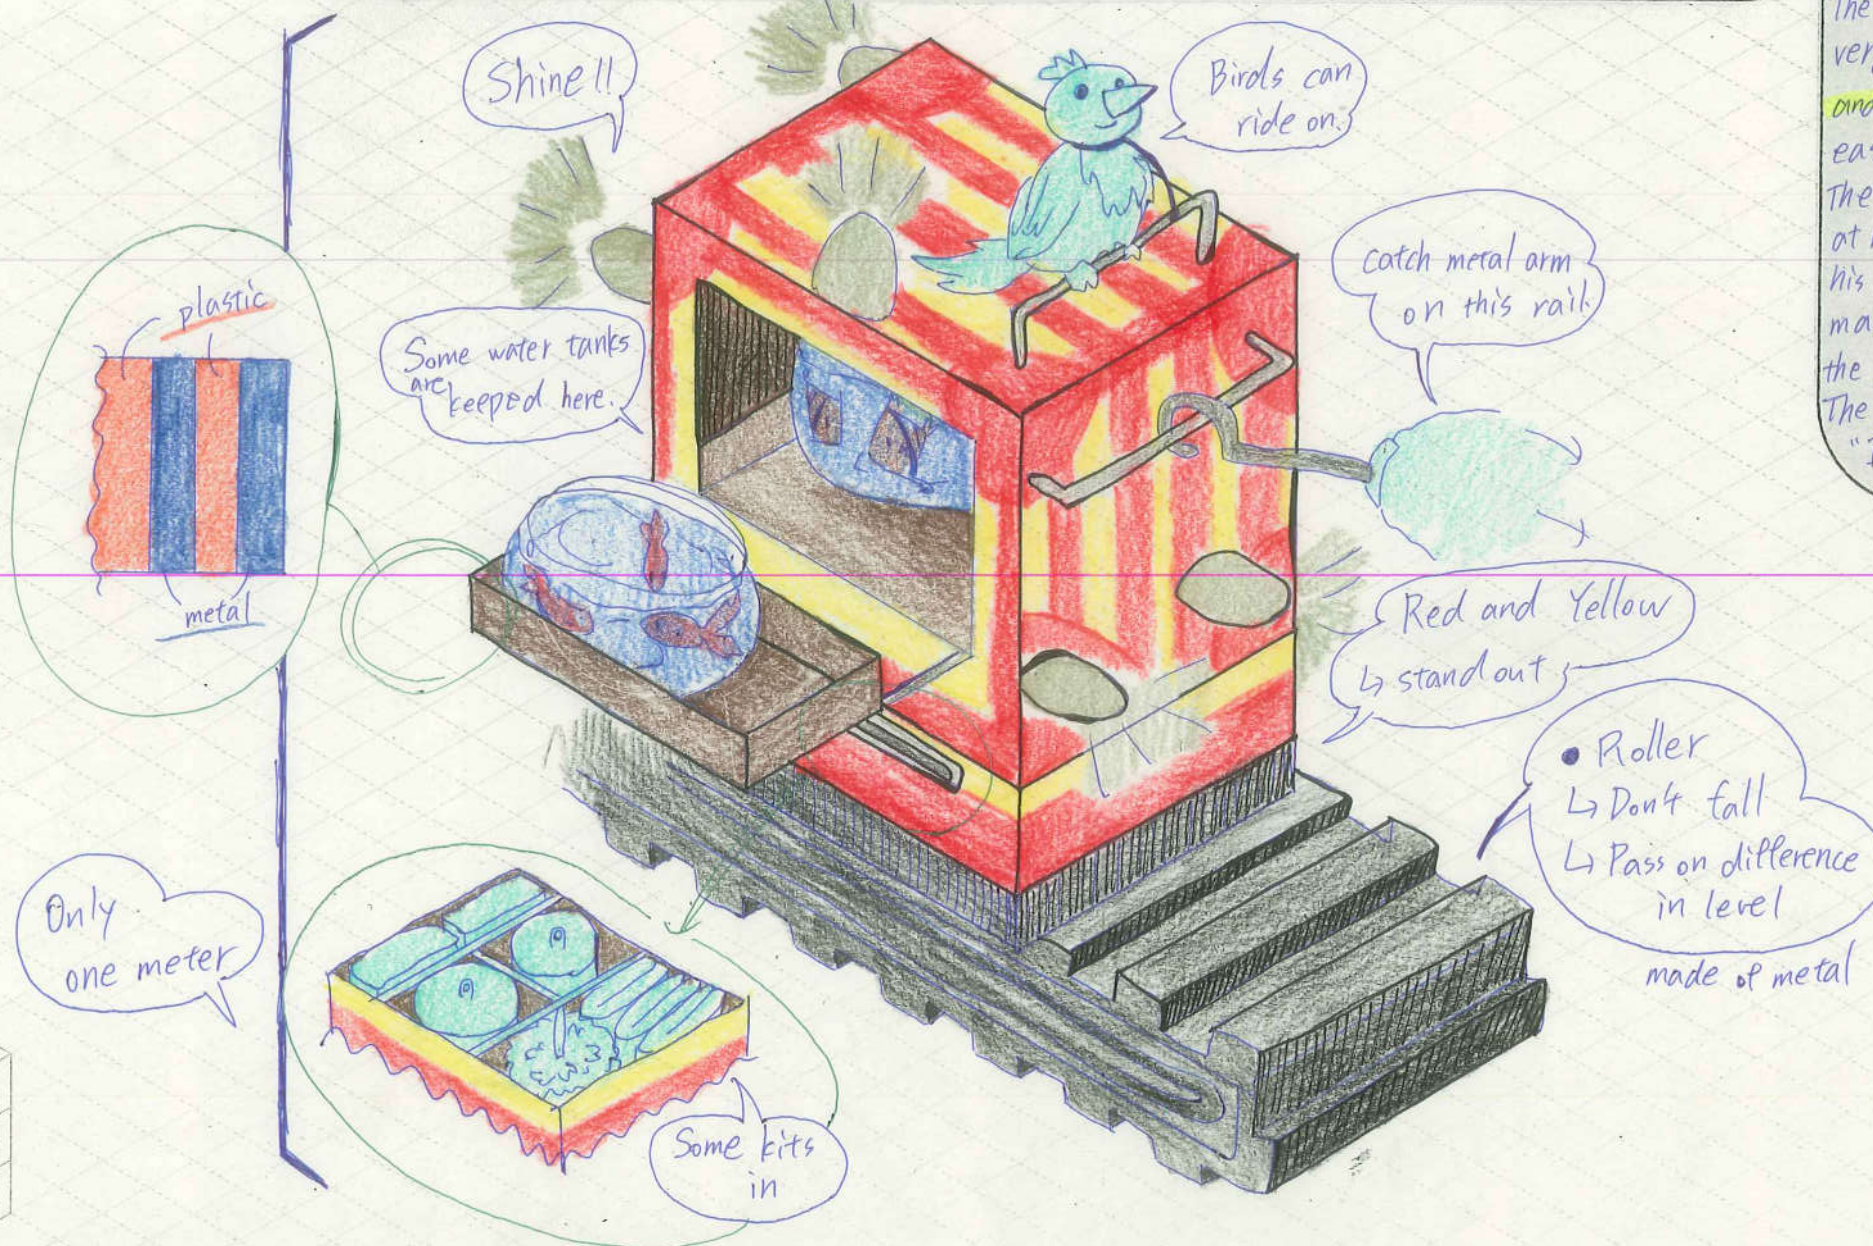

PRODUCT DESCRIPTION

The product is an **object to carry things in**. The client has an arm. So I think the product is better **not to be heavy** so I'll make it of **plastic**. The client will use the product to carry his pets. So, if client carries fish with water tank, plastic will not absorb water. But, the products 'll be made of not only plastic, but also **metal**. Because the product has to be strong. His ship sometimes swings very heavier. But, metal is very heavy. I'll use **metal little**.

The client has one eye. So, he can't see things very well. So, the product's collar is **red and yellow**. The client'll be able to look for it easily.

The client will use it in the morning and at night. Because there are also some foods for his pets. And it's dark at that time. So I'll make it with **some lamps** to be light around the product.

The client who use it will be say "I can use it to take care of fishes easily."
