

Client Profile

He's Johnson. He is a future scientist. He is thirty three years old, but he looks so young because he became a child because of a medicine. The medicine is invented by him, so no one knows that he is an adult. He is very clever, so he invented many things. One of his greatest inventions is the method to communicate with aliens and invite them to the Earth. The alien is 200 years old and it is one of his friends.

It is 2222, 203 years from now, he lives in New York. New York has air pollution so everything is inside the building even a park. The air pollution is becoming serious, so he always thinks about the way to clean the air easily and quickly. In addition, there are so many tall buildings in the city, so people can't be lit up enough. He always looks for the good light to live healthy.

It's a light ball for everything. It has a very small sensor to sense your finger movement and vibration. Therefore, if you tap the light, it feels the vibration and changes the color or the intensity of the light. If you slide your finger to the light like changing the size of a picture in a smartphone, it sees the movement and changes the size. Therefore, it can be very big, so it can light a huge place. On the other hand, it can be very small, so we can have it easily.

The sensor has propellers like a drone, so this light can fly. If you point the light and move the finger, it flies to where your finger points next. Of course, if you point your other hand, it comes back to you.

However, propellers make a strong wind. Therefore, if you use this light near the paper or you, you should use its stand.

The sensor is made from metal, but the metal is very little and mainly, it's made from plastic, so it is light.

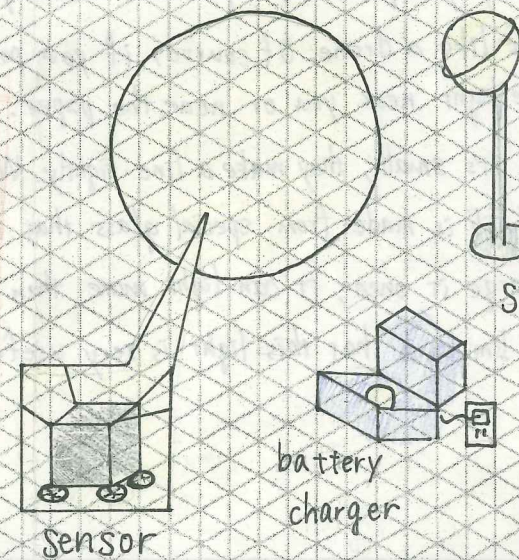

SHINE

The surface is a lot of LEDs. When it is small, they make a line tightly. When it is big, they make a line with a lot of gaps. Each LED has a very little computer, so it can move itself. The surface of LED is made from special glass that is very strong but very light.

The energy of this light is electricity. If you charge it once, it can light more than 100 hours and fly more than 50 hours.
